Mail Code DE-9J
Chicago, IL 60604-3590

**Re: Former Koppers Wood-Treating Site – Carbondale, Illinois
Work Plan for Additional Investigations**

Dear Ms. Bury:

In response to a December 18, 2008 letter from the United States Environmental Protection Agency (USEPA), Beazer East, Inc. (Beazer) submitted the following three Sampling and Analysis Plans (SAPs) for the above-referenced Site to the USEPA on May 7, 2009:

- Sampling and Analysis Plan for Evaluation Area 1 – Southern Drainage Ditches
- Sampling and Analysis Plan for PCDD/PCDF Sampling – Evaluation Areas 2, 3 and 5
- Sampling and Analysis Plan for PCDD/PCDF Sediment Sampling – Crab Orchard Creek

The SAPs have been revised to address USEPA's August 10 and September 24, 2009 comment letters, as discussed and agreed to on multiple conference calls. The revised/final SAPs are provided with this letter as Attachments A (Southern Drainage Ditches), B (Evaluation Areas 2, 3 and 5) and C (Crab Orchard Creek).

In addition to submitting the final SAPs, this letter also provides the following quality assurance (QA)-related information specific to the attached SAPs, in response to USEPA's September 24, 2009 comment letter:

- Beazer's responses to USEPA's September 24, 2009 comments (Attachment D)
- A "Functional Quality Assurance Project Plan (QAPP)" approval page (Attachment E)
- A table indicating which sections of the February 2008 QAPP are relevant to each specific SAP (Attachment F)
- National Environmental Laboratory Accreditation Program (NELAP) certifications for TestAmerica and Vista Analytical Laboratory (Attachment G)

Ms. Carolyn Bury

October 26, 2009

Page 2 of 2

The final SAPs and attached QA-related information constitute a "Work Plan for Additional Investigations" at the Site. It is our understanding that USEPA will obtain the necessary signatures for the Functional QAPP approval page (Attachment E) as part of their approval of this Work Plan. Please contact me if you have any questions or comments.

Sincerely,

Michael Slenska, P.E.

Senior Environmental Manager

Sampling and Analysis Plan for
Evaluation Area 1 – Southern
Drainage Ditches

SAMPLING AND ANALYSIS PLAN FOR EVALUATION AREA 1 – SOUTHERN DRAINAGE DITCHES

BEAZER EAST, INC. FORMER KOPPERS WOOD-TREATING SITE CARBONDALE, ILLINOIS

Introduction/Purpose

In response to a letter from the United States Environmental Protection Agency (USEPA) dated December 18, 2008, and in accordance with discussions during a January 28, 2009 meeting and multiple subsequent conference calls, Beazer East, Inc. (Beazer) has prepared this Sampling and Analysis Plan (SAP) for additional soil sampling activities in and around the southern drainage ditches area of the Former Koppers Wood-Treating Site in Carbondale, Illinois (the Site; Figure 1). This SAP, originally submitted on May 7, 2009, has been revised to address USEPA's August 10 and September 24, 2009 comment letters, as discussed and agreed to on multiple conference calls.

The investigations described herein are, in part, a continuation of prior efforts to characterize and delineate the extent of Site-related constituents in the vicinity of the southern drainage ditches. To the extent that these investigations include further characterization of the presence and distribution of polychlorinated dibenzo-p-dioxins/polychlorinated dibenzofurans (PCDDs/PCDFs) in soils, this SAP represents one component of additional PCDD/PCDF investigations required by USEPA's December 18, 2008 letter. In this regard, the southern drainage ditches represent one of several Evaluation Areas (EAs) – specifically, EA 1¹ – that have been developed in consultation with the USEPA. The scope of work for EAs 2, 3 and 5 is provided in a separate, concurrently submitted SAP.

Consistent with the USEPA's December 18, 2008 letter, data from the investigations described herein will be used to assess the need for and extent of remedial activities in the southern drainage ditches. Specifically, it is anticipated that the data will support identification of up to 3,000 cubic yards of soil that may be removed from the area for placement within the onsite Corrective Action Management Unit (CAMU) containment cell prior to final closure of the CAMU. In addition, the data will be used to support future human health and ecological risk evaluations of EA 1.

Background

Surficial soil samples from within, nearby and south of the southern drainage ditches area have been collected on three occasions over the last several years:

- In March 2005, USEPA collected surficial soil samples from residential areas south of the Site
- In May 2005, Beazer collected surficial soil samples to confirm/modify the proposed Former Process Area surface cover limits
- In March 2006 and March/June 2008, Beazer collected surficial soil samples to characterize the nature and extent of impacts in the southern drainage ditches area

¹ The boundary of EA 1 shown on Figure 1 was modified slightly during preparation of this SAP so that samples previously collected from the northern-most of the two southern drainage ditches are included in EA 1 rather than in EA 2, as identified on figures previously provided to the USEPA.

The sample locations associated with these three sample events that lie within, near and south of the southern drainage ditches area are shown on Figure 1, and the associated laboratory analytical data are summarized in Tables 1 and 2. These data, in part, served as the basis for developing the scope of work presented below. For example, where existing data indicate elevated concentrations, additional step-out locations are proposed in an effort to delineate the extent of impacts. Additionally, as requested by USEPA in a letter to Beazer dated August 10, 2009 and discussed with USEPA during multiple conference calls, additional sample locations have been proposed to more thoroughly characterize EA 1 and to provide data to support future risk evaluations.

Scope

Soil sampling is proposed at 34 locations (Figure 1)². At each location, a sample³ will be collected from the 0- to 0.5-foot depth interval using a stainless-steel trowel. Soil types/characteristics and descriptions of any non-aqueous phase liquid (NAPL), staining, odors and/or sheens will be recorded in a field notebook.

The analytical scope, location description and rationale for each sample location is summarized in Table 3. The following analytical methods will be used:

- Polycyclic aromatic hydrocarbons (PAHs) and pentachlorophenol – USEPA SW-846 Method 8270C
- Arsenic – USEPA SW-846 Method 6010B
- Polychlorinated dibenzo-p-dioxins and polychlorinated dibenzofurans (PCDDs/PCDFs) – USEPA SW-846 Method 8290

As indicated in Table 3, not all samples will be analyzed for all constituent groups. Rather, samples from a given location will be analyzed for one or more parameters consistent with the characterization and delineation objectives. The numbers of samples from EA 1 proposed for analysis of each parameter group are summarized as follows:

- PAHs – 28
- Pentachlorophenol – 23
- Arsenic – 28
- PCDDs/PCDFs – 25

To the extent possible, recovered soils will be homogenized prior to placing them into sample containers. Excess soils will be placed back into the hole following sample collection. All sample locations will be staked and surveyed (or GPS-located) so that they can be accurately depicted on the site plan and re-established in the future, if necessary.

² As discussed with USEPA during multiple conference calls, if two sample locations along a flow path have elevated concentrations, it will be assumed that the area between the two samples has a similar concentration to the upgradient and downgradient locations.

³ As indicated in Table 3, sample A1-17 is to be located within the topographic-based flow path between a culvert and the shallow ditch to the Large Pond. If multiple flow paths exist between the culvert and ditch, discrete samples will be collected from up to four flow paths and combined into a single composite sample. The analytical results of the composite sample will be assumed to be representative of each discrete sample location.

Quality Assurance/Quality Control

PAH, pentachlorophenol and arsenic samples will be analyzed by TestAmerica in Pittsburgh, Pennsylvania. PCDD/PCDF samples will be analyzed by Vista Analytical Laboratory in El Dorado Hills, California. Quality assurance/quality control (QA/QC) samples will be collected at the frequencies specified in the Quality Assurance Project Plan (QAPP; ARCADIS, February 2008). Analytical data will be validated in accordance with USEPA National Functional Guidelines for Data Review, as discussed in the QAPP.

Equipment Cleaning and Waste Management

Non-dedicated/non-disposable sampling equipment will be cleaned prior to use at each sample location following procedures outlined in the QAPP (i.e., non-phosphate detergent wash, distilled/deionized water rinse, and triple rinse sequence of solvent followed by distilled/deionized water).

In accordance with the QAPP, equipment cleaning fluids will be collected for treatment at the onsite wastewater treatment system (WWTS). Used personal protective equipment (PPE), disposable sampling equipment, and other miscellaneous wastes will be placed into a 55-gallon drum and staged at a designated area near the WWTS for subsequent characterization and disposal by Beazer.

Data Review and Reporting

Following completion of the sampling and receipt/validation of the laboratory analytical data, Beazer will prepare draft data summary tables and sample locations maps for review/discussion with USEPA. Data summary tables will include calculated values for Total PAHs (sum of 16 individual PAHs) and 2,3,7,8-TCDD Toxic Equivalents (TEQ; calculated using WHO-2005 Toxic Equivalency Factors).

Schedule

This SAP is one of three related plans provided in response to USEPA's December 18, 2008 letter and that address further investigation of PCDDs/PCDFs at the Site. Following USEPA approval of the planned scopes of work, Beazer anticipates that the work of these plans will be performed in a single mobilization. Pending suitable weather and field conditions, it is anticipated that the field work will be initiated within approximately two weeks following USEPA approval. The work of this SAP will require approximately two days to complete. Regardless of the start date or duration of the field work, the draft data summary tables and sample location maps will be submitted to the USEPA within approximately four to six weeks following receipt of all associated laboratory analytical data.

TABLE 1**SUMMARY OF EXISTING SOUTHERN DRAINAGE DITCHES AREA SURFICIAL (0-0.5') SOIL SAMPLE ANALYTICAL DATA (PENTA, PAHs, ARSENIC)****Beazer East, Inc.****Former Koppers Wood-Treating Site****Carbondale, Illinois****Notes:**

SVOCs = semivolatile organic compounds

PAHs = polycyclic aromatic hydrocarbons

mg/kg = milligrams per kilogram (or parts per million)

bgs = below ground surface

NA = not analyzed

[] = duplicate sample result

D = value obtained from analysis of a diluted sample

J = estimated value

Due to a matrix effect, compounds benzo(b)fluoranthene and benzo(k)fluoranthene could not be chromatographically resolved by the laboratory. Because the laboratory could not resolve the two compounds, the assumption was made by the laboratory to quantitate and report the entire peak as benzo(b)fluoranthene and to report benzo(f)fluoranthene as non-detect. Because the assumption cannot be made that the compound benzo(k)fluoranthene is non-detect, the validator has calculated a concentration for benzo(f)fluoranthene using the area count associated with the laboratory-reported detection of benzo(b)fluoranthene. Sample results associated with both compounds were qualified as "JX".

U = non-detected (associated value is the laboratory reporting limit)

1. Sample ID Definitions (for "SDD" samples):

TLB = top of left bank (looking north or west)

TRB = top of right bank (looking north or west)

15LB = approx. 15' out from the top of left bank (looking north or west)

15RB = approx. 15' out from the top of right bank (looking north or west)

A = at previous sample location (center of ditch)

SPL = south of previous sample location, on Beazer property line

15N = approx. 15' north of previous sample location

15S = approx. 15' south of previous sample location

TABLE 2
SUMMARY OF EXISTING SOUTHERN DRAINAGE DITCHES AREA SURFICIAL (0-0.5') SOIL SAMPLE ANALYTICAL DATA (PCDDs/PCDFs)

Beazer East, Inc.
Former Koppers Wood-Treating Site
Carbondale, Illinois

Notes:

PCDDs/PCDFs = polychlorinated dibenzo-p-dioxins/polychlorinated dibenzofurans

ug/kg = micrograms per kilogram (or parts per billion)

bgs = below ground surface

NA = not analyzed

[] = duplicate sample result

J = estimated value (below the lower calibration limit)

U = non-detect (associated value is the estimated maximum possible concentration or sample-specific estimated detection limit)

1. 2,3,7,8-TCDD TEQ = 2,3,7,8-TCDD toxic equivalents, calculated using the following Toxic Equivalency Factors (TEFs; WHO, 2005):

1,2,3,4,6,7,8-HpCDD	0.01	1,2,3,7,8-PeCDD	1
1,2,3,4,6,7,8-HpCDF	0.01	1,2,3,7,8-PeCDF	0.03
1,2,3,4,7,8,9-HpCDF	0.01	2,3,4,6,7,8-HxCDF	0.1
1,2,3,4,7,8-HxCDD	0.1	2,3,4,7,8-PeCDF	0.3
1,2,3,4,7,8-HxCDF	0.1	2,3,7,8-TCDD	1
1,2,3,6,7,8-HxCDD	0.1	2,3,7,8-TCDF	0.1
1,2,3,6,7,8-HxCDF	0.1	OCDD	0.0003
1,2,3,7,8,9-HxCDD	0.1	OCDF	0.0003
1,2,3,7,8,9-HxCDF	0.1		

* For non-detect values, 1/2 the reporting limit was used for calculating 2,3,7,8-TCDD TEQs.

Introduction/Purpose

In response to a letter from the United States Environmental Protection Agency (USEPA) dated December 18, 2008, and in accordance with discussions during a January 29, 2009 meeting and multiple subsequent conference calls, Beazer East, Inc. (Beazer) has prepared this Sampling and Analysis Plan (SAP) for polychlorinated dibenzo-p-dioxin/polychlorinated dibenzofuran (PCDD/PCDF) soil sampling activities in selected Evaluation Areas (EAs) of the Former Koppers Wood-Treating Site in Carbondale, Illinois (the Site; Figure 1).¹ Specifically, this SAP covers PCDD/PCDF soil sampling in EA 2 (former sprayfield, former north drainage ditch, former lagoon area), EA 3 (western end of the Site) and EA 5 (upgradient Smith Ditch area), as shown on Figure 1. This SAP, originally submitted on May 7, 2009, has been revised to address USEPA's August 10 and September 24, 2009 comment letters, as discussed and agreed to on multiple conference calls.

The scope of work for EA 1 (southern drainage ditches) is provided in a separate, concurrently submitted SAP. Beazer is focusing this SAP on the initial sampling efforts on EAs 2, 3 and 5 for the following reasons:

- These areas are located within Beazer-owned property; therefore, property access agreements/negotiations are not required to implement the field work (whereas sampling in EAs 4, 5 and 7 would require access to non-Beazer-owned properties)
- These areas are located closest to the presumed source areas of the Site, such that if potentially significant PCDD/PCDF impacts are not observed in these areas, sampling in downgradient areas would not be warranted

The purposes of the sampling activities described herein are to generally characterize the presence and extent of PCDDs/PCDFs in surficial soils within EAs 2, 3 and 5, and to provide data to 1) support future human health and ecological risk evaluations, and 2) determine the need for and scope of PCDD/PCDF characterization sampling in downgradient EAs 4, 6 and 7 (Figure 1).

Scope

Soil sampling is proposed at a total of 33 locations: 11 in EA 2 (Figure 2), 17 in EA 3 (Figure 3), and 5 in EA 5 (Figure 4). At each location, samples will be collected from the 0- to 0.5-foot depth interval using a stainless-steel trowel. Soil types/characteristics and descriptions will be recorded in a field notebook.

¹ The EAs identified on Figure 1 were developed in consultation with USEPA. The boundary between EAs 1 and 2 was modified slightly during preparation of this SAP so that samples previously collected from the northern-most of the two southern drainage ditches are included in EA 1 rather than in EA 2, as previously proposed.

All 33 samples will be submitted for laboratory analysis of PCDDs/PCDFs by USEPA SW-846 Method 8290. To the extent possible, recovered soils will be homogenized prior to placing them into sample containers. Excess soils will be placed back into the hole following sample collection. All sample locations will be staked and surveyed (or GPS-located) so that they can be accurately depicted on the site plan and re-established in the future, if necessary.

Quality Assurance/Quality Control

All samples will be analyzed by Vista Analytical Laboratory in El Dorado Hills, California. Quality assurance/quality control (QA/QC) samples will be collected at the frequencies specified in the Quality Assurance Project Plan (QAPP; ARCADIS, February 2008). Analytical data will be validated in accordance with USEPA National Functional Guidelines for Data Review, as discussed in the QAPP.

Equipment Cleaning and Waste Management

Non-dedicated/non-disposable sampling equipment will be cleaned prior to use at each sample location following procedures outlined in the QAPP (i.e., non-phosphate detergent wash, distilled/deionized water rinse, and triple rinse sequence of solvent followed by distilled/deionized water).

In accordance with the QAPP, equipment cleaning fluids will be collected for treatment at the onsite wastewater treatment system (WWTS). Used personal protective equipment (PPE), disposable sampling equipment, and other miscellaneous wastes will be placed into a 55-gallon drum and staged at a designated area near the WWTS for subsequent characterization and disposal by Beazer.

Data Review and Reporting

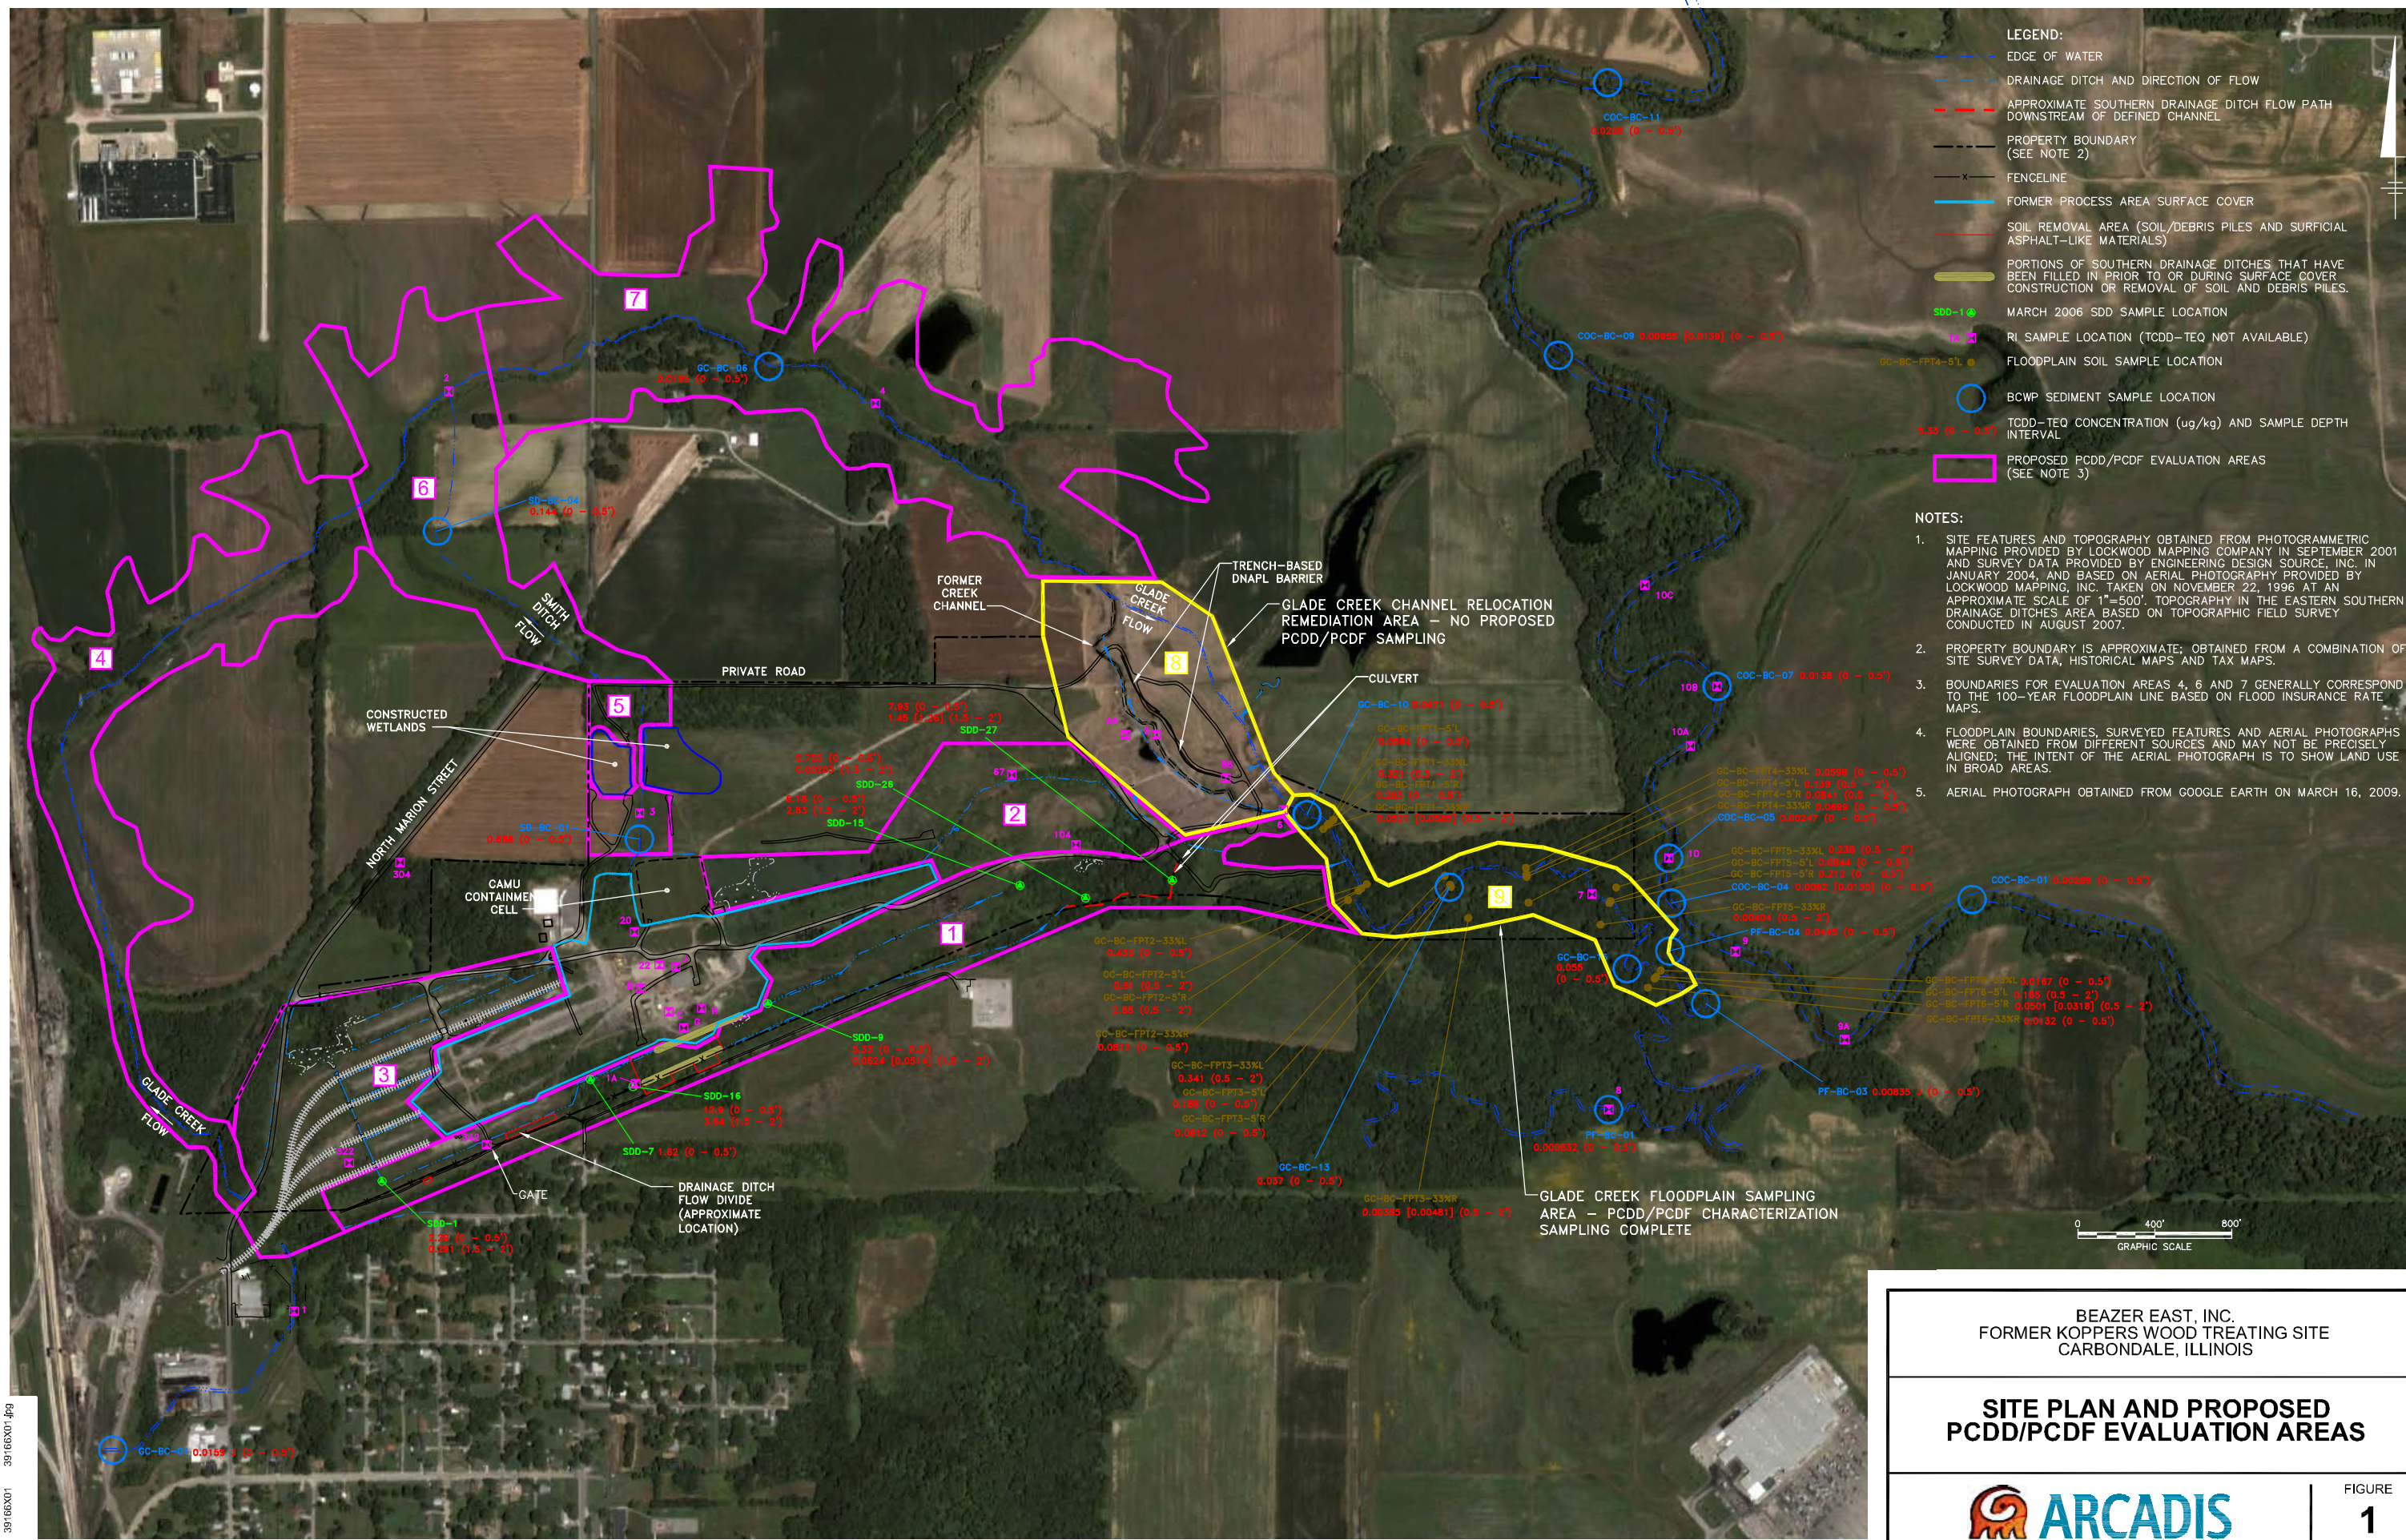

Following completion of the sampling and receipt/validation of the laboratory analytical data, Beazer will prepare draft data summary tables and sample locations maps for review/discussion with USEPA. Data summary tables will include calculated values for 2,3,7,8-TCDD Toxic Equivalents (TEQ; calculated using WHO-2005 Toxic Equivalency Factors).

Schedule

This SAP is one of three related plans provided in response to USEPA's December 18, 2008 letter and that address further investigation of PCDDs/PCDFs at the Site. Following USEPA approval of the planned scopes of work, Beazer anticipates that the work of these plans will be performed in a single mobilization. Pending suitable weather and field conditions, it is anticipated that the field work will be initiated within approximately two weeks following USEPA approval. The work of this SAP will require approximately two days to complete. Regardless of the start date or duration of the field work, the draft data summary tables and sample location maps will be submitted to the USEPA within approximately four to six weeks following receipt of all associated laboratory analytical data.

Sampling and Analysis Plan for
PCDD/PCDF Sediment Sampling
– Crab Orchard Creek

SAMPLING AND ANALYSIS PLAN FOR PCDD/PCDF SEDIMENT SAMPLING – CRAB ORCHARD CREEK

BEAZER EAST, INC. FORMER KOPPERS WOOD-TREATING SITE CARBONDALE, ILLINOIS

Introduction/Purpose

As discussed in a November 19, 2008 letter from Beazer East, Inc. (Beazer) to the United States Environmental Protection Agency (USEPA), a preliminary review of polychlorinated dibenzo-p-dioxin/polychlorinated dibenzofuran (PCDD/PCDF) concentrations in Crab Orchard Creek sediment samples indicates that the point at which PCDD/PCDF concentrations in downstream sediments have begun to decline with distance from the Site was not identified by the 2008 Baseline Characterization Work Plan (BCWP) sampling. To address this data gap, and as one component of additional PCDD/PCDF investigations required by USEPA's December 18, 2008 letter, Beazer has prepared this Sampling and Analysis Plan (SAP) for additional sediment sampling activities in Crab Orchard Creek downstream of the Former Koppers Wood-Treating Site in Carbondale, Illinois (the Site). This SAP, originally submitted on May 7, 2009, has been revised to address USEPA's September 24, 2009 comment letter, as discussed and agreed to on multiple conference calls.

Scope

Sediment sampling is proposed at three locations in Crab Orchard Creek, downstream of the downstream-most BCWP sample location COC-BC-11 (Figure 1). At each location, a composite sediment sample will be collected using Lexan tubes and/or a dredge sampler. Each composite sample will consist of approximately five to eight discrete samples collected from the 0- to 0.5-foot depth interval within an area that represents the width of the creek at the targeted location. Once the discrete samples at a given location have been collected, they will be combined and mixed in a dedicated/disposable container to create a single, homogenous composite sample. Sediment characteristics (e.g., color, grain size, presence of organic matter), and descriptions of any non-aqueous phase liquid (NAPL), staining, odors and/or sheens will be recorded in a field notebook.

Sediment samples will be collected in a downstream to upstream manner to minimize the possibility of cross-contamination between locations. A new Lexan tube will be used for each sample location (but not between each discrete sample at a given location). The sample locations are anticipated to be accessed with a boat.

The three sediment samples will be submitted for laboratory analysis of PCDDs/PCDFs by USEPA SW-846 Method 8290. All sample locations will be staked and surveyed (or GPS-located) so that they can be accurately depicted on the site plan and re-established in the future, if necessary.

Quality Assurance/Quality Control

All samples will be analyzed by Vista Analytical Laboratory in El Dorado Hills, California. Quality assurance/quality control (QA/QC) samples will be collected at the frequencies specified in the Quality Assurance Project Plan (QAPP; ARCADIS, February 2008). Analytical data will be validated in accordance with USEPA National Functional Guidelines for Data Review, as discussed in the QAPP.

Equipment Cleaning and Waste Management

Non-dedicated/non-disposable sampling equipment will be cleaned prior to use at each sample location following procedures outlined in the QAPP (i.e., non-phosphate detergent wash, distilled/deionized water rinse, and triple rinse sequence of solvent followed by distilled/deionized water).

In accordance with the QAPP, equipment cleaning fluids will be collected for treatment at the onsite wastewater treatment system (WWTS). Used personal protective equipment (PPE), disposable sampling equipment (including Lexan tubes), and other miscellaneous wastes will be placed into a 55-gallon drum and staged at a designated area near the WWTS for subsequent characterization and disposal by Beazer.

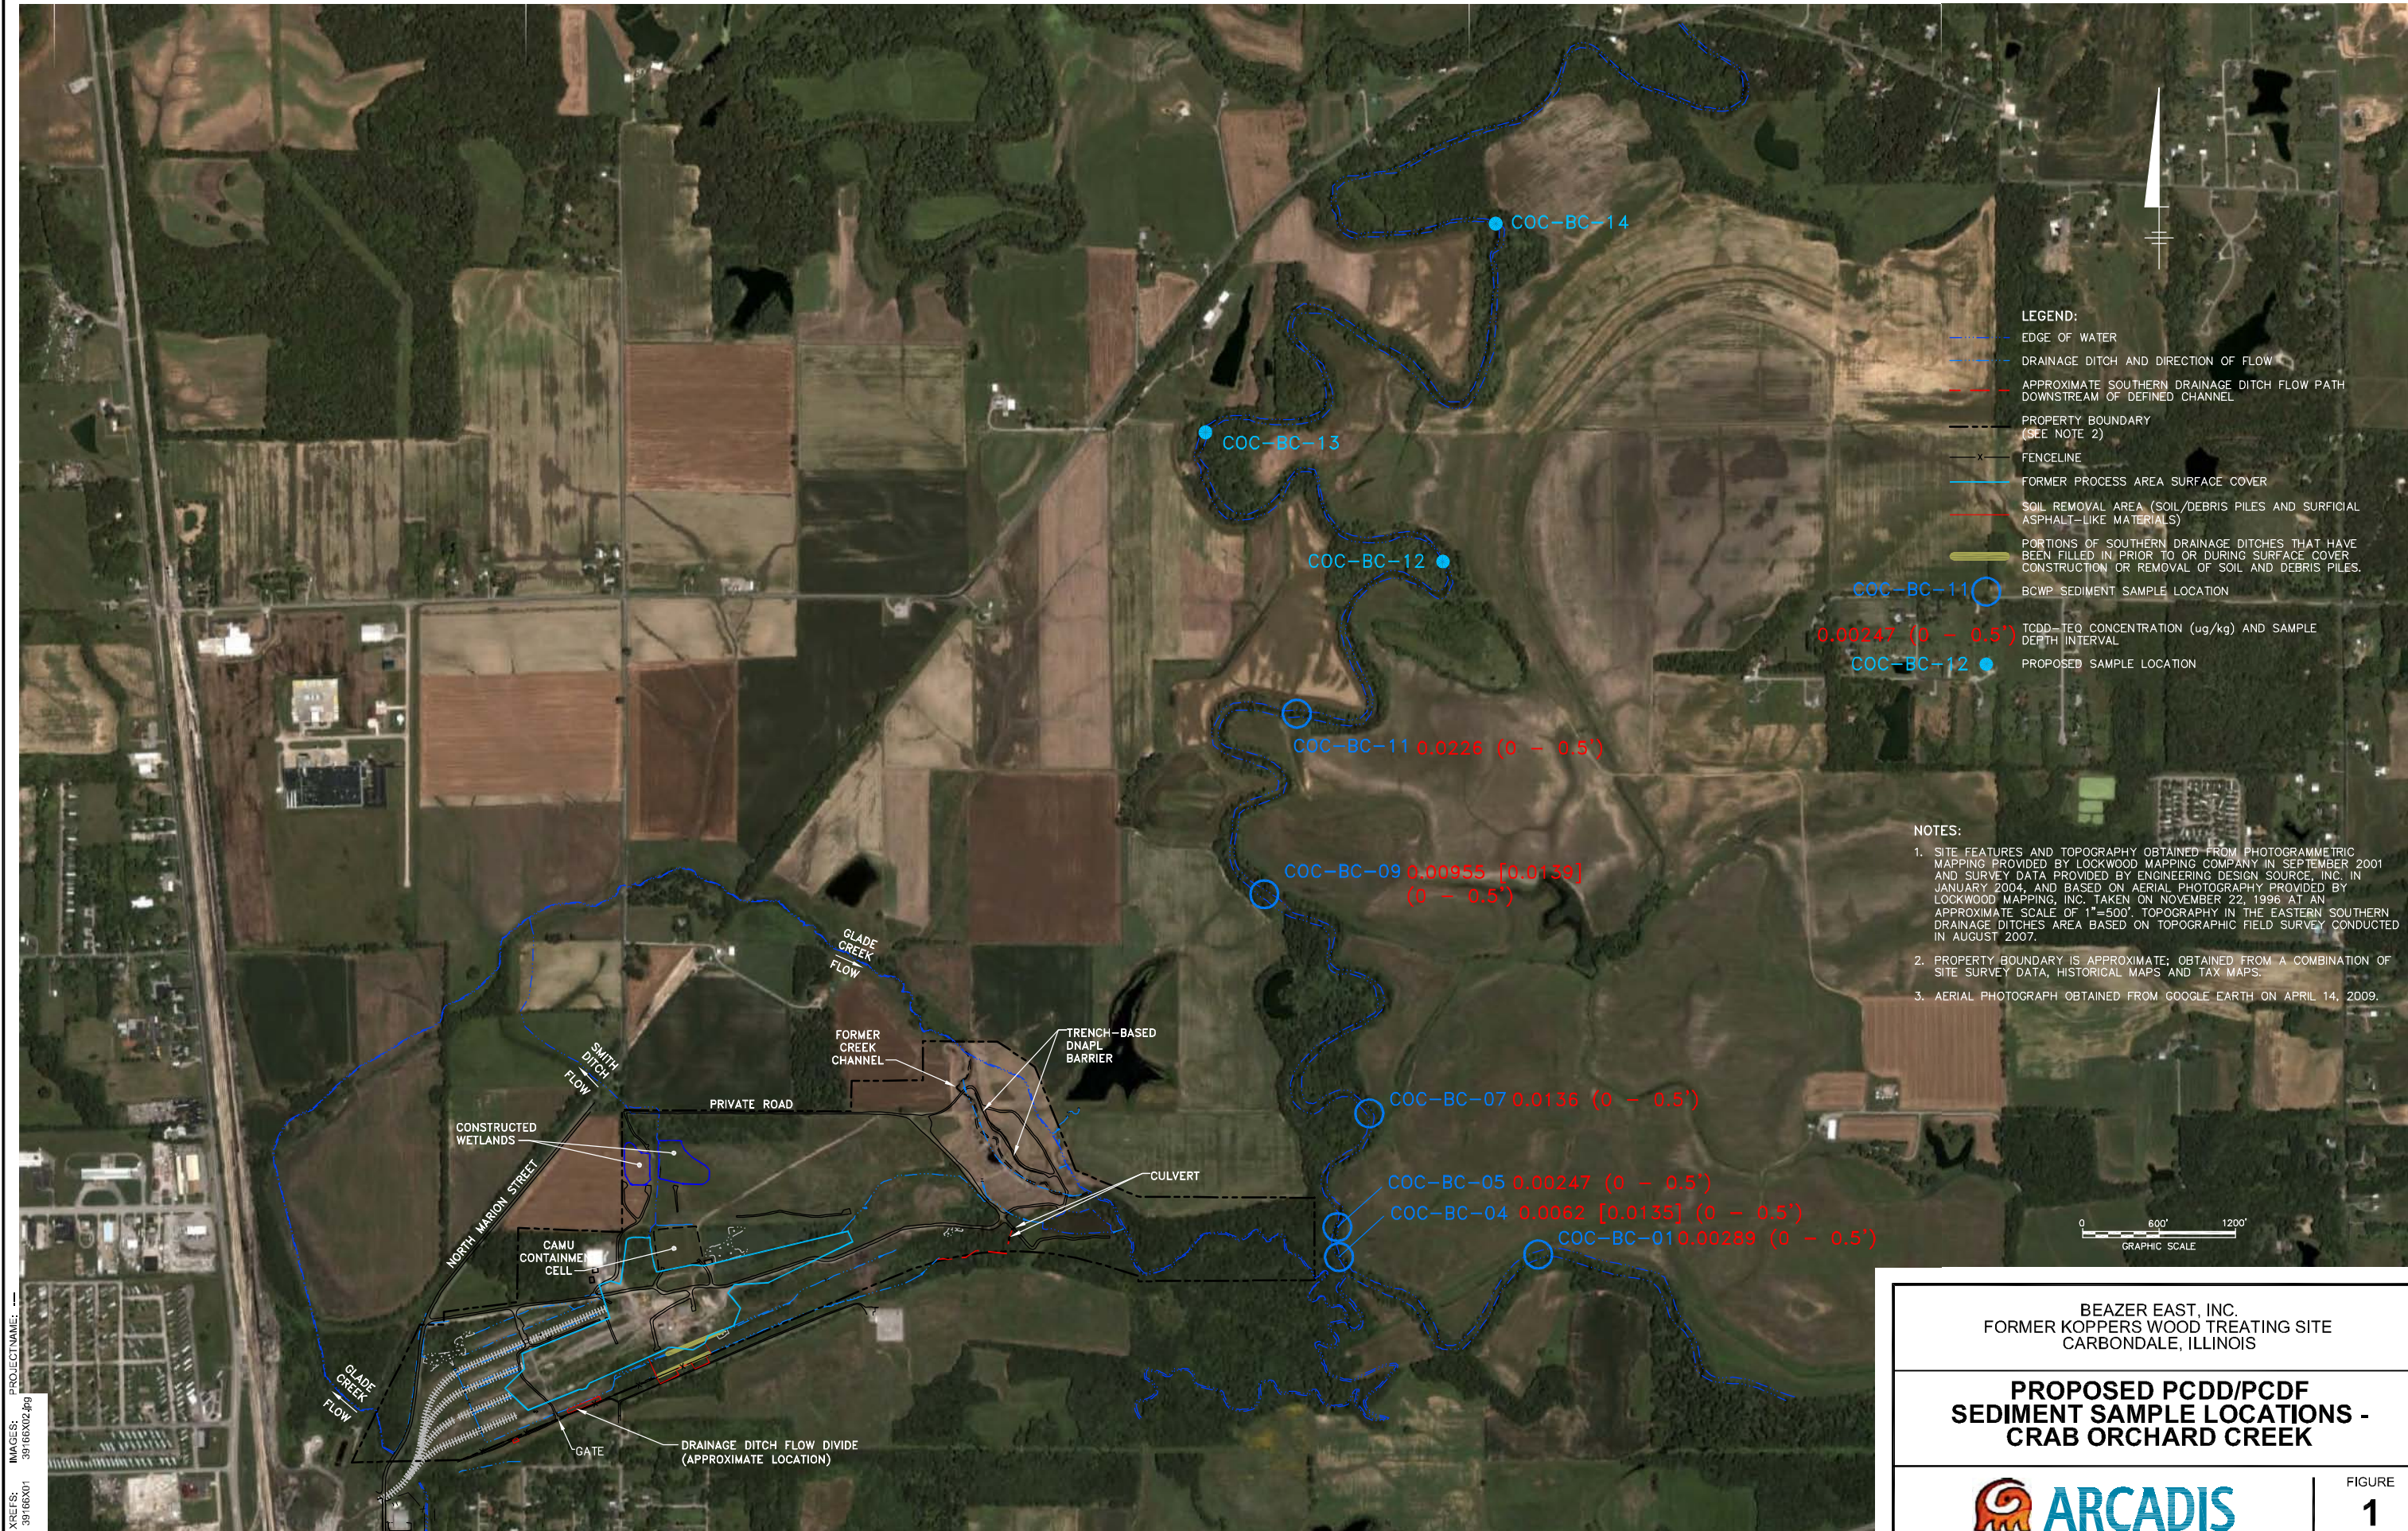

Data Review and Reporting

Following completion of the sampling and receipt/validation of the laboratory analytical data, Beazer will prepare a draft data summary table and sample locations map for review/discussion with USEPA. The data summary table will include calculated values for Total PAHs (sum of 16 individual PAHs) and 2,3,7,8-TCDD Toxic Equivalents (TEQ; calculated using WHO-2005 Toxic Equivalency Factors).

Schedule

This SAP is one of three related plans provided in response to USEPA's December 18, 2008 letter and that address further investigation of PCDDs/PCDFs at the Site. Following USEPA approval of the planned scopes of work, Beazer anticipates that the work of these plans will be performed in a single mobilization. Pending suitable weather and field conditions, it is anticipated that the field work will be initiated within approximately two weeks following USEPA approval. The work of this SAP will require approximately one day to complete. Regardless of the start date or duration of the field work, the draft data summary table and sample location map will be submitted to the USEPA within approximately four to six weeks following receipt of all associated laboratory analytical data.

Appendix D

Beazer's Responses to USEPA's
September 24, 2009 Comments

The following are Beazer East, Inc.'s (Beazer's) responses to the United States Environmental Protection Agency's (USEPA's) September 24, 2009 comments related to the February 2008 Quality Assurance Project Plan (QAPP) and quality assurance- (QA-) related components of the May 2009 Sampling and Analysis Plans (SAPs) for the Former Koppers Wood-Treating Site in Carbondale, Illinois (the Site). USEPA's comments are provided in italics, followed by Beazer's response in bold.

USEPA Comment #1: The draft 2008 QAPP specifies that work plans will be submitted to EPA for approval prior to initiating sampling events. EPA expects that such work plans, collectively, will contain necessary supplemental quality assurance related information not included or otherwise highlighted in the 2008 QAPP. The EA SAPs for the next phase of investigation, therefore, should reference all "generic" components of the 2008 draft QAPP deemed relevant to the EA SAPs. For example, if the chain-of-custody approach expressed in the 2008 QAPP will be used, then incorporate that section, and any other sections (or subsections) which are also germane to the EA SAPs, by reference.

In addition to or in place of referencing the QAPP, relevant portions of the QAPP could be inserted into the EA SAPs or included as attachments, provided such sections are relevant to this next phase of investigation. Alternatively, a table could be included showing all the sections or subsections of the 2008 QAPP incorporated by reference into the SAPs.

Beazer Response: The 2008 QAPP was written such that it would be comprehensive and applicable for all foreseeable future sampling events, such that it could be referenced in subsequent work plans and not require frequent updates or restating of QA-related information in every work plan (refer to Section 1 of the QAPP). For any subsequent scope of work where applicable QA-related information was not contained in the QAPP, such QA-related information would then be detailed in a work plan.

The May 2009 SAPs do not include any sampling or analytical items that are not already addressed in the 2008 QAPP. For the purposes of brevity and consistency with the stated purpose of the QAPP, Beazer did not repeat such information in the SAPs. However, as requested, and for the sole purpose of obtaining USEPA's approval on the SAPs, Beazer will revise the SAPs to include a table that indicates which sections of the 2008 QAPP are relevant to each specific SAP. Please also refer to the response to Comment #2 below.

USEPA Comment #2: EPA considers that if the SAPs include key QA components then the SAPs will constitute an approvable "functional QAPP" for the forthcoming investigation phase. As such, a single QAPP sign-off sheet should accompany/precede the individual EA SAPs (which for convenience can now be compiled into a single work plan). In addition to the Beazer signature lines, signature lines should be included for: Carolyn Bury, Project Manager, Allen Debus, Chemist, George Hamper, Section Chief, and Jose Cisneros, Branch Chief.

Beazer Response: Beazer does not understand why this approval process would need to be repeated each time a work plan is submitted when the intent of the February 2008 QAPP was that it be applicable to all foreseeable future sampling events. This objective was discussed and mutually agreed to by both USEPA and Beazer prior to the initial version of the QAPP that was submitted to USEPA on May 30, 2006. Beazer's February 2008 QAPP submittal adequately addressed all prior USEPA comments and should be approved by USEPA. Given that the February

2008 QAPP has not yet been approved by the USEPA, requiring these additional signatures with each work plan would not be consistent with USEPA's expressed desire to accelerate these investigations.

USEPA Comment #3: Referring to page 21 of the QAPP, reported data should be CLP-like Level IV (not Level III).

Beazer Response: The February 2008 QAPP identifies three levels of reporting: 1 – Minimal Reporting, 2 – Modified Reporting, and 3 – Full Reporting. Level 3 reporting, which includes a full CLP-like data package from the lab, will be required for the data generated under the SAPs. The February 2008 QAPP does not identify a Level IV reporting.

USEPA Comment #4: A table of all the constituents on the analyte list must be included in the SAP(s). In EA 1, other chemical parameters will be analyzed, but these are not explicitly identified.

Beazer Response: The four constituents/constituent groups identified in the SAPs are PCDDs/PCDFs, PAHs, pentachlorophenol and arsenic. The specific PCDD/PCDF congeners and PAHs to be analyzed for are listed in Table 2B of the February 2008 QAPP. As discussed in the response to Comment #1 above, submittal of the revised SAPs will include reference to the pertinent QAPP sections and information.

USEPA Comment #5: It should be specified how analytical results will be reported. It is EPA's assumption that PCDD/PCDF results will be reported as TEQ values; however this is not so stated in the EA SAPs. Also, please directly state in the SAPs which PAHs and "select metals" will be reported, and by which method(s). A table with this information is preferred.

Beazer Response: Consistent with our prior practice, PCDD/PCDF results will be reported in data summary tables as TEQ values determined using WHO-2005 TEFs. The SAPs will be updated to specify this reporting methodology.

As indicated in the response to Comment #5, a list of PAHs is provided in Table 2B of the 2008 QAPP and is applicable to the subject SAPs. As indicated in the SDD SAP, arsenic is the only metal proposed to be analyzed. The proposed laboratory analytical methods are specified in the three SAPs.

USEPA Comment #6: Apparently, the only analytical methods to be employed, or so far proposed, will be 8290, 8270C and 6010. Please clarify whether method 6020 will be needed to meet eco-risk values for any metals on the analyte list (in other words, will any other test methods be needed to measure other parameters sampled in this event?). Please clarify this matter in the revised EA SAPs.

Beazer Response: As indicated in the SAPs, Method 8270C will be used for PAHs and pentachlorophenol, Method 8290 will be used for PCDDs/PCDFs and Method 6010B will be used for arsenic.

USEPA Comment #7: For this next phase of study, media to be tested will not include any biota, surface water or groundwater. When referencing the 2008 QAPP, therefore, please emphasize that only those (cited) sections of the 2008 draft QAPP relating to soil and sediment sampling bear relevancy to the "functional QAPP" supporting the fall 2009 EA sampling event.

Beazer Response: The May 2009 SAPs accurately describe scopes of work limited to soil and sediment sampling, making it clear that biota, surface water, and groundwater sampling and analyses are not part of the scope of work. As discussed in the response to Comment #1 above, submittal of the revised SAPs will include reference to the applicable QAPP sections and information. This will add further clarity to the type of sampling and analysis not included in the scopes of work.

USEPA Comment #8: The section of the EA SAP(s) describing Steps 0 – 7 should be revised per the August 10, 2009 EPA letter, and state how data will relate to future investigations to be performed (e.g. hot-spot screening, risk assessments, nature and extent characterization, etc.).

Beazer Response: Beazer does not believe that this comment is germane to the QAPP, or QAPP-related issues. The EA SAPs have been discussed with USEPA on several conference calls during September 2009. It has been agreed that the EA SAPs will be conditionally approved by USEPA with revised sampling locations. After data collection and evaluation, the next steps would be determined. This approach was determined to allow the field sampling work to proceed expeditiously. Therefore, Beazer does not believe it is necessary or appropriate to modify the EA SAP language regarding steps 0-7 at this time; this language will be excluded from the revised EA SAP.

USEPA Comment #9: If available, NELAC/NELAP certifications should be provided for the laboratories which will analyze the samples. Each respective laboratory's certification should be presented, clarifying its capability on a parameter/method-specific basis.

Beazer Response: NELAP certifications from TestAmerica (lab conducting the PAH, pentachlorophenol and arsenic analyses) and Vista Analytical Laboratory (lab conducting the PCDD/PCDF analyses) will be provided with the revised SAPs.

USEPA Comment #10: For the ARCADIS "Sediment Probing and Sample Collection" SOP, which will presumably be incorporated by reference from the draft 2008 QAPP into the 2009 "functional QAPP," specify whether Lexan tubes or the dredge sampler will be used.

Beazer Response: Lexan tubes are the preferred sediment sampling device because they allow visual inspection of the recovered core, are disposable, and tend to capture a more uniformly representative sample throughout the target sampling depth. In the event that sampling with Lexan tubes is unsuccessful, a dredge sampler will be used. Site-specific conditions that could preclude the successful use of Lexan tubes may include extremely soft sediments that are not able to form an adequate plug at the bottom of the tube and as a result, the sediments fall out of the tube as it is pulled out of the sediment/water. Accordingly, ARCADIS plans to have both Lexan tubes and a dredge sampler available during the field work.

USEPA Comment #11: The sampling depth(s) in proposed media must be identified.

Beazer Response: All samples will be collected from the 0- to 0.5-foot depth interval. This depth interval is specified in all three of the May 2009 SAPs.

USEPA Comment #12: Finally, your September 2, 2009 letter addresses a comment made in the EPA August 10, 2009 letter regarding EPA's request that Method 8270 for pentachlorophenol (PCP) be replaced with modified Method 8151. Based on your letter, it appears that the underlying reason for the EPA comment on the method was not understood. Rather than a detection limit issue, as you appear to understand it, this is a percent analytical recovery issue. As our QA Policy states, method 8270 has a typical low bias (i.e. poor analytical recoveries) for PCP and therefore the gas chromatography method is was suggested by the RCRA QA Policy. Please specify what your contracted laboratory's anticipated matrix recoveries will be using 8270C (or 8270-SIM). If the lab anticipates only a 20% recovery, then modified Method 8151 can offer some advantages.

While EPA prefers that Method 8151 be used, given that the focus of this investigatory phase is on dioxin/furan TEQ, EPA will allow Beazer, at this phase of the project, to report the PCP parameter per your proposal (i.e. using 8270C). The laboratory's matrix spike recovery (sediment matrix) data will be examined by Allen Debus, chemist, at the time of data submittal. If resulting matrix spike recoveries are too low-biased, EPA will raise the modified Method 8151 matter again in the case of any further investigational phases where PCP data is required.

Beazer Response: The following table summarizes the Method 8270C pentachlorophenol percent recoveries for lab control samples (LCSs) and matrix spikes/matrix spike duplicates (MS/MSDs) from the March 2008 southern drainage ditches and Baseline Characterization Work Plan sampling event:

LCS	MS/MSD
82 %	70/69 %
92 %	55/88 %
71 %	43/41 %
90 %	71/65 %
50 %	55/53 %
86 %	74/92 %
75 %	71/65 %
71 %	39/42 %
88 %	63/64 %
78 %	78/85 %
86 %	44/39 %
72 %	
Average: 78.4 %	Average: 60/64 %

The acceptable percent recovery range for pentachlorophenol with Method 8270C is 18-117%. As indicated in the table above, all of the recoveries were within this range, and well above the 20% recovery level mentioned in USEPA's comment. Because of the adequate pentachlorophenol recoveries, and the reasons discussed in Beazer's September 2, 2009 letter, Beazer believes that the continued use of Method 8270C for pentachlorophenol analyses is appropriate.

CERTIFIED MAIL NO. 7003 3110 0004 0413 4120

Larry Matko
TestAmerica Pittsburgh
301 Alpha Drive RIDC Park
Pittsburgh, PA 15238

Re: Laboratory Accreditation Status
DEP Lab No. 02-00416

Dear Mr. Matko:

Your laboratory's Scope of Accreditation has been updated per your request in the e-mail dated April 17, 2009. The Department missed two requests on the application for accreditation received March 16, 2009 and the e-mail request received April 9, 2009. The following changes were made: fixed suspended solids and volatile suspended solids by SM 2540E were added in non-potable water. Your current status in the National Environmental Laboratory Accreditation Program in Pennsylvania is as shown on the attached listings. That list of accredited fields of testing replaces all previous lists.

Your laboratory shall not use this Scope of Accreditation to imply endorsement by the Department or the National Environmental Laboratory Accreditation Program. In order to maintain accreditation, your laboratory must remain in compliance with Departmental regulations.

Any person aggrieved by this action may appeal, pursuant to Section 4 of the Environmental Hearing Board Act, 35 P.S. Section 7514, and the Administrative Agency Law, 2 Pa.C.S. Chapter 5A, to the Environmental Hearing Board, Second Floor, Rachel Carson State Office Building, 400 Market Street, P.O. Box 8457, Harrisburg, PA 17105-8457, 717-787-3483. TDD users may contact the Board through the Pennsylvania Relay Service, 800-654-5984. Appeals must be filed with the Environmental Hearing Board within 30 days of receipt of written notice of this action unless the appropriate statute provides a different time period. Copies of the appeal form and the Board's rules of practice and procedure may be obtained from the Board. The appeal form and the Board's rules of practice and procedure are also available in braille or on audiotope from the Secretary to the Board at 717-787-3483. This paragraph does not, in and of itself, create any right of appeal beyond that permitted by applicable statutes and decisional law.

IF YOU WANT TO CHALLENGE THIS ACTION, YOUR APPEAL MUST REACH THE BOARD WITHIN 30 DAYS. YOU DO NOT NEED A LAWYER TO FILE AN APPEAL WITH THE BOARD.

IMPORTANT LEGAL RIGHTS ARE AT STAKE, HOWEVER, SO YOU SHOULD SHOW THIS DOCUMENT TO A LAWYER AT ONCE. IF YOU CANNOT AFFORD A LAWYER, YOU MAY QUALIFY FOR FREE PRO BONO REPRESENTATION. CALL THE SECRETARY TO THE BOARD (717-787-3483) FOR MORE INFORMATION.

If you have any questions regarding your laboratory accreditation status, please contact Ms. Bethany Piper at 717-346-8214 or me at 717-346-8212.

Sincerely,

Aaren S. Alger, Chief
Laboratory Accreditation Program

NELAP - RECOGNIZED

CALIFORNIA STATE

ENVIRONMENTAL LABORATORY ACCREDITATION PROGRAM BRANCH

CERTIFICATE OF NELAP ACCREDITATION

Is hereby granted to

VISTA ANALYTICAL LABORATORY

1104 WINDFIELD WAY
EL DORADO HILLS, CA 95762

Scope of the Certificate is limited to the
"NELAP Fields of Accreditation"
which accompany this Certificate.

Continued accredited status depends on successful
ongoing participation in the program.

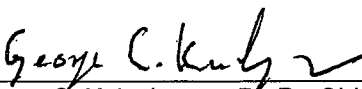

This Certificate is granted in accordance with provisions of
Section 100825, et seq. of the Health and Safety Code.

Certificate No.: **02102CA**

Expiration Date: **01/31/2010**

Effective Date: **01/31/2009**

Richmond, California
subject to forfeiture or revocation
